HOW TO CHANGE THE BELT

Remove the 10mm bolt from the inspection plate

Remove the 3 LH side 10mm bolts.

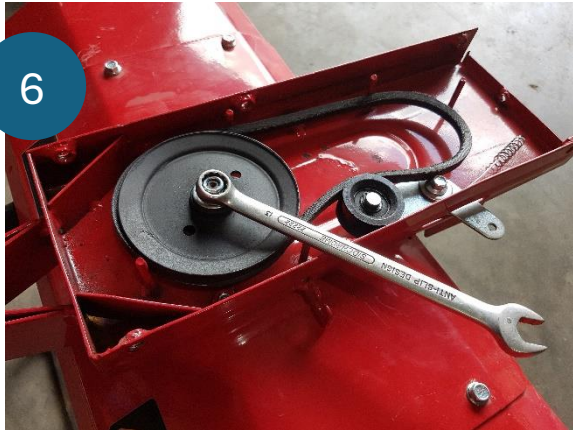

Remove the 3 RH side 10mm bolts.

Lift engine and control arm to one side.

The belt is trapped by alignment pins.

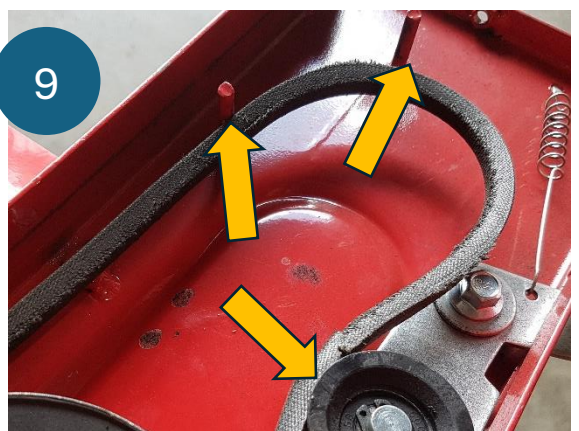

Remove the pulley 13mm nut and washer.

Remove belt. Don't loose the woodruff key.

Insert new belt within the pins.

Pins and tensioner pulley hold the belt in place.

With the belt in place, lower the engine pully into the belt centre.

11

Once lowered, make sure the belt is in line with the pulley.

12

Slide engine forward to engage belt into pulley, this should line up the 6 side bolt holes.

13

Put the control arm in position. Install the 4 side 10mm bolts.

14

Put the inspection front plate back on and install the 2 side and front 10mm bolt.
